AI Academic Integrity: When do I use AI?

No AI — AI — Permitted

AI must not be used at any stage of this learning or assessment process.

- In some cases, AI may be restricted due to privacy, cultural sensitivity, or age-appropriateness considerations.

Unless a teacher explicitly allows AI use for a specific task, students should assume that AI is permitted.

Expectations will be clearly communicated to ensure transparency and understanding.

Idea — AI — Starter

With teacher permission, students may use AI for pre-task activities such as planning, brainstorming, outlining and initial research.

- AI is used as a starter with the ideas developed and refined independently.

- AI contributions are limited to idea generation and must not appear in the final product.

Students must disclose their AI use, as directed by the teacher.

Feedback — AI — Helper

Students may use AI to receive feedback during the revision stage, with teacher permission.

- AI can assist with improving clarity, organization, or technical accuracy, but cannot contribute directly to the final product.

Students must disclose their AI use, as directed by the teacher.

Work — AI — Partner

With teacher permission, students may use AI to complete specific aspects of a learning task.

- AI contributions may appear in the final product, provided their **use is transparently disclosed, as directed by the teacher.**

- Students are responsible for assessing any AI-generated content's accuracy, bias, and appropriateness.

Teachers will decide how students will disclose their use of AI. Teachers will also disclose their own use of AI as a model of responsible usage.
Students are responsible for their academic integrity and must remember that AI outputs are never a final product.
